Electric robot Floor, walls and water line

Pool Valet Rc was purpose designed to clean a family pool in 2, 3 or 4 hours, depending on the cleaning cycle selected. It is a compact machine with a suction rate of 17 m³/h and two levels of filtration finesse: 1 PVC net cartridge (large debris - beginning of the pool season) and 1 polyester fibre cartridge (ultra-fine - Dacron®).

Efficient:

Pool Valet Rc is very easy to use and does not require any installation. It is suitable for pools with complex shapes up to 15 m long.

A control algorithm allows it to adapt to any waterproofing finish to thoroughly clean the pool floor, walls and water line.

A clogging indicator warns when the filtration cartridge is full.

It can be commanded from a distance using the remote control.

Safe:

Pool Valet Rc is powered by a low voltage transformer (230 / 24 Volts), fitted with a switch with an automatic stop to guarantee user safety, as required by European standards. The automatic stop powers down the robot at the end of its cleaning cycle.

It also features safety systems to ensure its own protection in, and out of, the water.

The 'no water' safety mechanism stops the robot after a few seconds if it leaves, or is removed from, the water.

Should the robot meet an obstacle, it will either change direction or stop, if necessary.

Fast:

Pool Valet Rc was specially designed to ensure optimum cleaning of the pool in as short a time as possible.

The Pool Valet Rc cleaning cycle was optimised as a function of the pool geometry and dimensions. This decreases wear and tear and prolongs the robot's service life.

Reliable:

Pool Valet Rc is fitted with 3 motors:

- one motor for filtration,
- two traction motors.

Pool Valet Rc robots are covered by a 3 year guarantee for all parts.

Transport trolley

Power supply unit with a weekly timer

Swivel connection on the cable

Polyester fibre filtration cartridge (ultra-fine)

PVC net filtration cartridge (large debris)

- Recommended pool length: 15 m,
- Cable length: 18 m,
- Cleaning cycle: 2, 3 or 4 hours,
- Brushes the pool floor, walls and water line,
- Filtration cartridge clogging indicator,
- Remote control,
- Swivel connection on the electrical cable,
- Two levels of filtration finesse: 1 PVC net filtration cartridge (large debris - beginning of the pool season) and 1 polyester fibre filtration cartridge (ultra-fine),
- Suction rate: 17 m³/h,
- Storage accessory: trolley,
- Duration of the guarantee: 3 years on all parts.
